### Actix delivers web-based network performance intelligence system

A web-based solution has been launched to manage and distribute network performance engineering information. Actix Viewpoint's automated, thin-client system helps mobile operators to manage large test data volumes, speeding and easing the network engineering process.

For carriers operating complex wireless networks, access to performance engineering information can be complicated and time-consuming, typically forcing engineers to access multiple, disparate systems, which lack automation, visibility and integration. "Actix Viewpoint is designed to fulfill two core benefits: improving the efficiency and reducing the operational expenditure involved in engineering the network," said Richard Kateley, director of NSM Product Development.
